

Tric M100 System

The TRIC formula puts big power in a small footprint, and the M100 is the most formidable example of that formula. Projects with tough ground conditions or limited access are natural candidates for the M100. This unit is designed to burst up to 450mm pipelines including Vitreous Clay, Cast Iron, Asbestos & Reinforced Concrete, Plastic, Ductile Iron & Steel. TRIC Tools Inc. invented the first sewer lateral pipe bursting system in 1996, opening the market for trenchless home sewer replacement. TRIC's lightweight compact design means that the equipment can be used where conventional pipe bursters just cannot fit. Small enough to be used in manholes and having the power to deliver without the need to dismantle and re-assemble making these tools the first choice for confined space working as well as large diameter projects. Benefits of the TRIC Cable Bursting Systems:

- Strength & Reliability
- Safer Working Environment
- Minimum Setup Required
- Finance Available

Specifications

Pulling Force	98 tons @ 5000 psi
Puller Weight	172 kg
Puller Dimensions	254 x 356 x 1041 mm
Max Pipe dia Burst	450 mm
