

Tric V24 System

The V24 is a stripped-down version of the original TRIC system that started the industry of sewer lateral pipe-bursting back in 1996. Simple, fast, and economical, the V24 pulls directly in-line with the pipe, eliminating the pulley wheel found in the standard TRIC configuration. Geared for higher flow and lower pressure, the unit can run as an auxiliary device connected to an excavator or similar piece of hydraulic equipment. Standard resistance plate recommended. TRIC Tools Inc. invented the first sewer lateral pipe bursting system in 1996, opening the market for trenchless home sewer replacement. TRIC's lightweight compact design means that the equipment can be used where conventional pipe bursters just cannot fit. Small enough to be used in manholes and having the power to deliver without the need to dismantle and re-assemble making these tools the first choice for confined space working as well as large diameter projects. Benefits of the TRIC Cable Bursting Systems:

- Strength & Reliability
- Safer Working Environment
- Minimum Setup Required
- Finance Available

Specifications

Pulling Force	24 tons @ 2500 psi
Puller Weight	104 kg
Puller Dimensions	651 x 432 x 514 mm
Max Pipe dia Burst	150 mm
