

Tric X30 System

With formidable power in a super-sleek package, the X30 is your tool of choice to burst pipes up to 150mm in diameter. New refinements make this generation of X-Series pullers the most durable and reliable yet. Designed for minimum maintenance and maximum performance! TRIC Tools Inc. invented the first sewer lateral pipe bursting system in 1996, opening the market for trenchless home sewer replacement. TRIC's lightweight compact design means that the equipment can be used where conventional pipe bursters just cannot fit. Small enough to be used in manholes and having the power to deliver without the need to dismantle and re-assemble making these tools the first choice for confined space working as well as large diameter projects. Benefits of the TRIC Cable Bursting Systems:

- Strength & Reliability
- Safer Working Environment
- Minimum Setup Required
- Finance Available

Specifications

Pulling Force	29.5 tons @ 6000 psi
Puller Weight	36 kg
Puller Dimensions	191 x 245 x 762mm
Max Pipe dia Burst	150 mm
